Bhavana Kumari Anna, Software Engineer.

bhavanakumarianna@gmail.com | 404-645-6294 | LinkedIn |Atlanta, GA

PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience developing cloud-based applications, distributed systems, and scalable platform services. Primarily focused on Java and Python for backend development, with hands-on experience in REST APIs, microservices, and Kubernetes. Strong background in Azure cloud architecture and building reliable, high-performance systems. Experienced in AI-powered solutions including LLMs and RAG for enhancing application capabilities. Known for solving complex problems across multiple code stacks, demonstrating ownership and accountability, effective collaboration, a growth mindset, and delivering reliable, high-quality software systems.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, C++, C#, JavaScript, TypeScript, .NET, Linux, Rust, Data Structures & Algorithms
Frameworks & Backend Technologies: Spring Boot, ASP.NET Core, Node.js, Django, GraphQL, RESTful Services, Serverless Architecture, Full Stack Development, Product Engineering
Cloud & DevOps: Microsoft Azure, AKS, ARM, Microsoft Fabric, AWS, GCP, Docker, Kubernetes, CI/CD, Release Management, Azure DevOps, GitHub Actions, Terraform, PowerShell, Bash, Telemetry & Observability
Azure Compute & Integration: App Service, Azure Functions, ARM Templates, Azure Arc, Azure Service Bus, Azure Event Grid
Azure Data & Monitoring: Azure SQL Database, Azure PostgreSQL, Azure Cosmos DB, Azure Data Factory, Azure Synapse Analytics, Azure Monitor, Application Insights, Log Analytics, Azure Resource Graph (ARG), Metadata Management, OneLake
Distributed Systems & Architecture: Load Balancing, High Availability, Scalability, Fault Tolerance, Caching, Microservices Architecture, REST APIs, Systems Engineering, Software Engineering Principles
Reliability & Operations: SSL/TLS, SLA/SLO, Resource Management, Production Deployment, Operational Readiness, Playbooks, Reliability Engineering, OSS, SRE, Incident Management, DRI Model, On-call Support
AI & Intelligent Systems: Azure OpenAI, LLMs, Embeddings, RAG, AI Agents, Deep Learning, Information Retrieval, AI Platform Development, Emerging Technologies, AI/ML Fundamentals, GitHub Copilot
Databases & Data: PostgreSQL, MySQL, MongoDB, SQL, NoSQL, Relational Database, Database Technologies, ETL
Tools & Platforms: Git, Postman, Jira, Power BI, Agile, Developer Tools, ServiceNow, Business Intelligence, Content Management, SDLC, Engineering Practices, Secure Coding, Documentation, OAuth2, JWT, OOP
Soft Skills: Leadership, Ownership & Accountability, Trustworthy, Committed, Creative Problem Solving, Critical Thinking, Cross-functional Collaboration, Engineering Excellence, Operational Excellence, Growth Mindset, Customer-Centric Mindset, Continuous Learning

WORK EXPERIENCE

Software Engineer — July 2025-Present

Cisco, Atlanta, GA

- Designed and developed scalable backend microservices and platform services using REST APIs, distributed systems and software engineering principles, and reusable design patterns, enabling artificial intelligence (AI) analytics integrations across high-traffic enterprise SaaS applications serving millions of users.
- Architected an end-to-end AI agent framework integrating Large Language Models (LLMs) and RAG pipelines with internal tooling APIs for automated root-cause analysis and contextual diagnostics, reducing mean-time-to-resolution (MTTR) by 40% and accelerating incident resolution across high-traffic production services.
- Implemented AI-driven anomaly detection pipelines using LLMs and embeddings on system metrics and logs; integrated vector search (FAISS) and Azure OpenAI embeddings for semantic log analysis, applying reliability engineering (SRE) practices to improve production scalability and reduce incident investigation time.
- Evaluated and optimized platform features through technical design reviews and A/B testing experiments, applying load-balancing strategies and model/data pruning techniques to improve system throughput by 20% and drive performance efficiency.
- Deployed containerized workloads using Azure Kubernetes Service (AKS) and Docker ensuring high availability and auto-scaling; built and deployed CI/CD pipelines using GitHub Actions and Azure DevOps to automate build, test, and deployment of cloud-native services.
- Implemented and monitored telemetry-driven data pipelines using Azure Monitor, Azure Data Factory, and observability dashboards in production, enabling data-driven insights and improving service reliability by 30%.
- Maintained production reliability applying SRE practices and efficient issue triage using JIRA; served as Designated Responsible Individual (DRI) in on-call rotations, debugging production issues and restoring system health.

Graduate Teaching Assistant — Aug 2023 – April 2025

Kennesaw State University, Atlanta, GA

- Designed and delivered structured curriculum and engineering-focused coursework in Data Structures, Algorithms, Operating Systems, and Distributed Systems, applying software development best practices to build real-world assessment workflows.
- Mentored students in developing scalable backend architectures, REST APIs, and database-driven applications, guiding design decisions and code quality from development through delivery.
- Supported students in testing and debugging code, enforcing coding standards and best practices for clean, maintainable, and secure software development through hands-on code reviews and structured feedback.
- Developed and deployed Python automation scripts to streamline grading workflows and infrastructure setup, reducing manual effort and improving operational efficiency.
- Designed and delivered hands-on lab sessions and project workshops on cloud computing and microservices, improving student project completion rates and practical understanding of real-world engineering systems.

Software Developer — May 2022 - June 2023

Infosys, Hyderabad, India

- Designed and developed enterprise backend services using Java and Python on Microsoft Azure cloud services and infrastructure, contributing to scalable SaaS-based enterprise applications.
- Developed and tested secure RESTful APIs integrating enterprise services and backend systems; authored API documentation, defined contracts and data schemas — reducing onboarding time by 35% and improving system interoperability.
- Deployed cloud infrastructure using Infrastructure-as-Code (Terraform, ARM Templates) to automate and standardize cloud resource provisioning across environments.

- Tested and validated migration of legacy applications to cloud-native architectures, including hybrid cloud resource management concepts aligned with Azure Arc; verified system scalability and performance improvements of 25% post-migration.
- Configured and monitored Azure Monitor, Application Insights, and Log Analytics in production to support observability, telemetry-driven operations, and early incident detection.
- Maintained production reliability through fine-tuning load-balancing configurations, ETL data processing optimizations, and enforcing policy-driven governance controls to ensure compliance and reduce infrastructure overhead across multi-cloud environments.

EDUCATION

Master of Science in Computer Science, GPA: 3.66/4.0

Kennesaw State University, GA **August 2023 – May 2025**

Coursework: Data Structures & Algorithms, Distributed Systems, Cloud Computing, Operating Systems, Database Systems, Computer Networks, Software Engineering, Object-Oriented Programming, Machine Learning Fundamentals, Computer Architecture, Big Data Analytics, Information Retrieval

Bachelors in computer science, GPA: 3.2/4.0

Krishna Chaitanya Institute Of Technology & Sciences, India **August 2018 - March 2022**

CERTIFICATIONS

- AWS Certified Developer – Associate
- Microsoft Certified: Azure Developer Associate
